

---

**Technical Project Manager, Network Engineering**

**Purpose & Key Objectives:**

- To project manage the overall delivery of complex customer engineering projects in EUMA, APAC & USA on various network infrastructure for a major blue chip Telco.
- Large scale migrations & deployments for multiple & concurrent financial industry based customer projects.
- The lead PM interface between the client & the rest of the customer's business.
- Ensure delivered to time, budget, & spec.

**Function & Responsibilities:**

- Project manage large-scale customer projects on customer's various networks (mainly global & MPLS).
- To work with the engineering, network implementation, network operations, customer relationship teams & clients.
- To manage various technical teams, required understanding of key technical areas including:
  - Basic telecommunications theory
  - General IP practices
  - Cisco Router hardware
  - Telco ordering process
  - Acceptance testing
  - Operational responsibilities.
- Post is global but most efforts outside of North America (though may require close working with a peer colleague in US).
- Technically astute candidate that can manage design, planning, implementation & other project teams.
- A hard-hitting candidate who must have strong interpersonal skills while being even-handed & an excellent negotiator.
- Ability to lead a large virtual team (but no line management responsibilities), demonstrated over a number of years.
- Aply deal with & manage clients.
- Use full project methodology.

**Requirements & Specific duties include:**

- Project manage all engineering aspects.
- Meet with the customer & various client groups to develop a detailed project plan.
- Chair regular project meetings.
- Keep customer fully informed, including rolled-up reports.
- Manage teams & escalate.
- Track using Microsoft Project.

**Experience, Special Skills & Qualifications:**

- Minimum of five years technical project management experience, responsible for the

project management & implementation of large global, wide area customer IP network infrastructure, for customers in the Financial Services or Banking Industry.

- Excellent communication skills (verbal & written) to senior management, engineering, operations & end customers.
- Excellent project management skills delivering projects against immovable deadlines.
- Ability to work with disparate groups of people, extract information & provide realistic objectives.
- Excellent organisational & man-management skills.
- Strong working knowledge of TCP/IP principles, protocols, architecture, & WAN.
- Strong knowledge of Cisco Routers & Switches.
- Thorough understanding of a network provider organisation.
- Proven experience & track record in delivering & implementing networking solutions.
- Degree or equivalent; Prince 2 etc preferred.
- Self-motivated, goal oriented & plenty of initiative.
